EQUUSCOM™ WiWi

Press Release

I.C.U. Trailer Cameras, LLC announces a new addition to the EQUUSCOM™ Trainer and Rider Communication Systems.

The EQUUSCOM™ WiWi provides one-to-one and group lesson communication for Equestrians in training. It can also be used for auditors to hear clearly during Equestrian Clinics.

Stuart, Florida September 5, 2012: I.C.U. Trailer Cameras, LLC has added a new communication system to the EQUUSCOM™ Family. EQUUSCOM™ WiWi is a 2.4 GHz voice and data communication solution. The EQUUSCOM™ WiWi is able to provide direct simultaneous communication between a Single Rider and the Trainer. The Trainer can mute the student or have open two-way interaction. The EQUUSCOM™ WiWi system is scalable, additional units can be introduced to be able to have a Single Trainer and Multiple Students in a group lesson. The students can individually communicate with the trainer as needed. The EQUUSCOM™ WiWi can be linked to a Mini Amplifier Speaker to provide auditors with clear listening to an Equestrian Trainer's instructions to a Rider in a Clinic.

The light weight EQUUSCOM™ WiWi is the size of a cigarette lighter and can be coupled with a variety of microphone and listening ear pieces. The EQUUSCOM™ WiWi can be clipped to your belt or to your clothing or hung from a necklace. The unit has four internal frequencies so simultaneous communication by four instructors in the same area can be had. The EQUUSCOM™ WiWi has an outdoor range of 100 meters (the length of a football field). The unit has buttons to adjust the volume. A Lithium-Polymer battery provides 8 hours of operation before needing to be recharged. The units can be recharged to full power in less than 2 hours by connecting to the on-board mini-USB port. A large battery condition LED glows Red while charging and turns Green when the unit is fully charged. Accessories for the EQUUSCOM™ WiWi are available including multi-unit charging racks, an aluminum carrying case and several different earpieces and headsets.
